Section 1: The Vision

FOUNTAIN CREEK WATERSHED VISION

The Fountain and Monument Creeks' corridor always has been the lifeblood of Colorado Springs. The corridor's rich natural resources sustained Native American tribes and attracted European settlers. General Palmer, the founder of Colorado Springs, realized the scenic and recreational value of the area and created a network of parkways that have been a defining element of Colorado Springs' identity. Over time, the natural character and functions of the corridor have been altered and disconnected, the richness diminished, and the creek access made inaccessible.

Informed by multiple planning efforts completed in the recent past, this plan lays out a comprehensive vision and strategy to restore the creek's environmental qualities, promote economic vitality, create a sense of place, and greatly enhance and expand the recreational opportunities that were so important to General Palmer's original vision.

A HOLISTIC VISION

A Vision for Restoring the Fountain and Monument Creek Corridor with Implications for the Watershed

The principles that guide this vision for the corridor, including Monument and Fountain creeks, are based on the belief that stormwater and flood risk management can be an integral part of a larger goal to maintain and restore natural functions of the creeks throughout the watershed. Moreover, the corridor provides opportunities for recreation, relaxation, and enhancement of the economic value and quality of life for residents and visitors of the Pikes Peak Region. These principles include the following:

» Restore the Natural Functions of the Corridor

Re-establish natural functions of the Monument and Fountain Creek floodplains as a part of a larger plan where all stream courses within the watershed are multi-use, multi-functional community assets.

Restored natural functions include increased channel sinuosity and working floodplain terraces, and can improve water quality, enhance wildlife habitat, and increase groundwater recharge.

» Create a Premier Destination for Outdoor Recreation and Leisure

Expand recreation opportunities to take advantage of the corridor's natural scenic and recreational qualities to unlock its full potential.

Orient and link new development toward an enhanced creek to encourage revitalization and redevelopment along the corridor.

» Support Economic Vitality and Revitalization

Capitalize on corridor and waterway enhancements to encourage economic development and revitalization through traditional private development as well as public-private partnerships.

Provide opportunities for water access, water recreation, and environmental education.

» Build a Strong Sense of Place Unique to the Pikes Peak Region

Enhance the corridor's natural qualities and recreational potential integrated within the Pikes Peak Region to strengthen its sense of place, foster a distinct identity, improve the quality of life for residents, and provide memorable experiences for visitors.

Placemaking and public art installations act as a beacon along the trail while creating moments of delight and fostering local identity.

- DOWNTOWN CORRIDOR**
- SOUTH CORRIDOR**

A WATERSHED APPROACH

Aligned with the important local value of “complete creeks,” this vision recommends a number of opportunities throughout the Pikes Peak Region. This plan’s primary recommendations are fully compatible with the City’s objectives for improving stormwater quality, reducing sediment, and managing flood risk as found in reports such as the municipal stormwater and construction guidelines as well as master planning documents approved by the City.

» **Re-Establish Functioning Floodplains** throughout the watershed.

Restore the original sinuosity of the stream channel and re-establish floodplain terraces to the degree possible to enhance water quality, wildlife habitat, and scenic natural qualities.

» **Improve Neighborhood Connections** and expand the trail network.

Create an expanded, interconnected, continuous network of recreational trails that improve creek and neighborhood access. Establish a hierarchy of trails to increase the quality and diversity of recreational experiences and complement the existing regional trail system.

» **Encourage Redevelopment** oriented toward the creek.

Catalyze redevelopment of underutilized lands adjacent to the corridor. Promote land uses that capitalize on the corridor’s scenic and recreational values. Encourage public/private partnerships that incentive private development to partner with the City of Colorado Springs and other partners in the development of joint-use stormwater treatment areas, trails, and other public amenities that benefit both public and private sectors.

POTENTIAL IMPROVEMENT AREAS

Wolf Ranch
Cottonwood Creek Park
Cottonwood Confluence
Monument Creek North
University Village
Templeton Gap Confluence
Coleman Park
Goose Gossage Park
Manitou Ball Park
21st Street
Gold Hill Mesa
Shooks Run
Cheyenne Creek
El Pomar Sports Complex
Wildflower Park
Sand Creek Confluence

LEGEND

- Future Community / Creek Connections
- ▬ Colorado Springs City Limits
- ▬ Watershed Boundary
- ▬ Streams and Waterways
- ▬ Project Study Area

Maintain and restore functioning floodplains along all streams within the watershed. Potential improvement areas indicate opportunities to connect the community to the creeks using the prototypes on the following page.

Existing Channel Conditions

Both Monument and Fountain creeks have been channelized or confined between levees. They no longer have functioning floodplains, which limits their natural flood storage and water quality treatment potential.

Re-Establish Functioning Floodplains

To the degree possible, restore the sinuosity of the creek channel and re-establish floodplain terraces that improve the multiple natural functions lost when the streams were channelized.

Improve Neighborhood Connections and Encourage Redevelopment

Provide for and encourage multiple opportunities to access the water's edge for nature and water-based recreation. Promote existing and new development orientation toward the corridor to take advantage of scenic and recreational access.

PRIMARY PLAN

RECOMMENDATIONS

The Monument and Fountain creeks corridor will become a continuous, multi-functional, multi-beneficial greenway leveraging foundational aspects of the Legacy Loop, Pikes Peak Greenway, and Fountain Creek Trail. The natural functions of the creek will be restored, while maintaining the corridor's important role as one of the city's primary stormwater conveyances. A seamless network of trails will support multiple options for access to the waterways and to the natural qualities of the corridor. Both existing and new neighborhoods will orient toward the corridor and connect directly to its natural and recreational assets.

Eight New and Revitalized Parks

The greenway corridor will be punctuated by eight major parks with naturalized riparian areas in between. Pikeview Reservoir anchors the north end of the project area bordered by Austin Bluffs Parkway and Nevada Avenue. Monument Valley Park serves as the central project area with plans to revitalize, restore, and supplement existing neighborhood parks. The downtown area of the visioning corridor is defined by a new linear park with multiple recreational opportunities for the existing Mill Street and adjacent neighborhoods, plus a formalized new gateway entry into downtown from the south.

Implementation

Colorado Springs expects continued and substantial population growth over the next 20 years which makes sustainable waterway development critical. Final design, funding, and implementation of this vision will rely on community leadership through coordinated efforts among landowners and municipal agencies – all timed alongside funding opportunities via local, state, federal, and philanthropic sources. This vision seeks to align various planning efforts and impacts upon creeks.

Eight New and Revitalized Parks

Connected by an enhanced creek with improved natural function and neighborhood creek access.

North Nevada Bluff Promenade and Pikeview Reservoir Park

Improved park amenities and creek access for future North Nevada redevelopment.

Goose Gossage Park Adventure Playground

A re-envisioned playground for discovery and nature play connects the park to the creek.

Roswell Place

A stormwater meadows promenade and mini park form a continuous edge along the creek.

Monument Valley Park and Centennial Neighborhood

A restored park design and a new neighborhood.

College Landing at Uintah

A gateway to the Old North End and a connected Colorado College campus.

America the Beautiful Park

A celebration of the confluence of Fountain and Monument creeks.

Drake Waterfront Reimagined

A catalyst for redevelopment and neighborhood connections to the waterway.

Gateway Park South

A new nature-based park for the existing Mill Street and surrounding neighborhoods.

Section 2: A Multi-Purpose Corridor

RESTORE THE NATURAL FUNCTIONS OF THE CREEK CHANNEL

As highways and railroads were constructed for a booming population, creeks were altered to accommodate the growth. The watershed features and natural characteristics of Fountain and Monument creeks were straightened and narrowed. As a result, stream flows, storm runoff, and base flows increased, destabilizing streambeds and diminishing their ability to promote the infiltration of rainfall, replenish groundwater, store sediment, and remove pollutants from stormwater. Moreover, the creeks' ability to support diverse and abundant wildlife was greatly diminished.

The restoration of the creeks' natural functions includes widening stream channels and improving sinuosity. This serpentine shape will reverse decades of change to: restore floodplain terraces; slow runoff rates to promote infiltration; reduce channel erosion; and remove urban pollutants from storm runoff. Highly sedimented streams with steep slopes, such as Monument and Fountain creeks, naturally develop multiple channel threads that encourage sediment drop in a characteristic braided pattern. These braiding deposit patterns encourage small areas of ponding that support ecological diversity. A full range of aquatic, subaquatic riparian, and upland areas will be restored to create diverse wildlife habitat and a more resilient landscape.

An indicator of success will be the restoration of natural braiding and observation of biological resurgence. It is expected this success will coincide with the widening of the channel and modification of the levees. The vision anticipates that this will be observable in areas of new creek alignment as creek beds widen and water slows through floodplain terraces.

Historic Creek Alignments

The historic creek alignment changes over time, illustrating the sinuous natural qualities of the creek prior to the construction of the levees in the Monument Valley and Downtown Corridor creek stretches.

- 1895 Creek Channel
- 1903 Creek Channel
- 1947 Creek Channel

WATER QUALITY AND SEDIMENT MANAGEMENT

The City of Colorado Springs has identified nonpoint source pollution as a significant problem. This pollution consists of contaminants from streets and developments that are carried to urban creeks and streams, including Monument and Fountain creeks. Nonpoint source pollution negatively impacts the quality of stream flows. It is a municipal priority, and a federal mandate, to improve the quality of storm runoff. An effective way to reduce nonpoint source pollution is to mimic natural stream processes through biofiltration and other natural, more passive, means of water quality quality treatment before it enters rivers or streams.

An important aspect of this vision, and an integral part of restoring the natural floodplain functions, is the integration of an extensive system of water quality treatment areas. To minimize the potential for regular maintenance due to sedimentation, local water quality treatment areas from adjacent neighborhoods and districts will be located at an elevation that rarely experiences flooding, and other water quality treatment areas intended to attenuate and infiltrate storm flows from the creek will be located at an elevation that will be inundated only during large flood events. Sediment basins will be strategically located to allow regular sediment removal at points where the channel widens and deposition occurs.

This vision plan proposes approximately 60 acres of new floodplain and water quality improvement areas.

Prototype Stormwater Section

Channel terracing can cohesively manage stormwater, water quality, sediment capture, and recreation

SELECTIVELY REMOVE AND RELOCATE LEVEES

The original plan for the City of Colorado Springs was organized around a network of parks and parkways, including the development of Monument Valley Park, located along Monument Creek. The park's plan recommended extensive landscape improvements, trails, and multiple crossings of the creek, making the creek one of the park's central features. The concepts are illustrated in a park master plan prepared by Charles Levitt in 1903. Monument Creek flooded on a regular basis, causing minor damage to park improvements. In 1935, a much larger flood caused extensive damage, and in response, to protect the park and adjacent neighborhood developments from further damage, levees lining the creek were constructed by the Civilian Conservation Corps. Although the levees have been effective at containing flood events, they create a significant barrier between the creek and the park and compromise the original park plan which integrated the sinuous creek channel into the park as a central feature. The diagram on the right illustrates existing levees and identifies locations recommended for levee removal.

The National Park System (NPS) conferred recognition of Monument Valley Park on the National Register of Historic Places. There are various types of historic stone used, including Manitou Green Stone and concrete slabs from the 1960s. It is expected that formal evaluation by a historic preservation specialist will be required to determine not only what is historic, but what sections of the walls and levees contribute to the NPS Historic Register.

As part of this proposed vision and strategy for Monument Valley Park, selected portions of the levees will be removed or relocated to re-establish the park's original relationship to the creek. Removal will be strategic, without damaging or compromising other historically significant park elements, while continuing to protect historic park areas and adjacent development from flooding. The most significant removal and relocation will be at the northern, most rural portion of the park. The pastoral qualities of the original creek will be mimicked and the original relationship of trails, stream access and crossings, and passive uses restored. Continuing downstream to Bijou Street, at key channel crossings and at points where the levees create a barrier between existing historic park uses, small portions of the wall will be removed or modified to provide direct channel access and enhance pedestrian crossings.

At America the Beautiful Park and upstream of Dorchester Park, the removal of the levees opens up the park to the creek, provides access to the creek, and restores the floodplain. The challenges to the levee removal at America the Beautiful Park that need to be considered include environmental mitigation and impacts to the Julie Penrose Fountain.

TRAIL CONNECTIONS

The vision for the Monument and Fountain creeks corridor includes approximately 14 miles of regional trail, 27 neighborhood connections, and 13 pedestrian creek crossings. The trails provide opportunities for short meanders and long treks to connect important destinations such as the U.S. Olympic & Paralympic Museum, Monument Valley Park, Sonderman Park, Weidner Field, Colorado College, and neighborhoods such as Old North End, Indian Heights, Westside, Downtown, Mill Street, Shooks Run, Goose Gossage Park, UCCS, and El Pomar Youth Sports Park.

The existing and proposed trails and connections leverage the Legacy Loop and Pikes Peak Greenway, and Fountain Creek Trail. Critical east-west trail connections are incorporated into the vision. Enhancements for commuting cyclists include better sight lines and separation from recreational users. The trail system consists of a hierarchy of promenades, boardwalks, primary trails, and secondary trails.

The trail system of Fountain and Monument creeks improves stewardship opportunities for the creeks and adjoining lands, bridging them into the public mainstream, promoting sustainable quality of life, and fostering environmental renewal.

EXPANDED PARK NETWORK

Protecting and enhancing the waterway increases natural and parkland opportunities. Curated parks will provide recreational space for local residents and tourists. Increasing outdoor recreational opportunities within the Pikes Peak Region adds value to the already robust tourism industry by encouraging visitors to experience the intrinsic qualities of the great Colorado Front Range, right in the heart of the city.

The vision proposes a new park network, made possible because much of the corridor is publicly owned. Ongoing management and maintenance will be provided by a single entity, such as the City of Colorado Springs. Funding for ongoing maintenance will be generated through the economic development activities and captured through special districts or other agreements established through the development process. The development community will be a partner to the City of Colorado Springs in managing the waterfront amenities.

Funding to establish the creekside parkway will be generated through economic investment opportunities including special districts, private investment, and philanthropic funding, as well as state and federal funding.

REDEVELOPMENT AND REINVESTMENT OPPORTUNITIES

Throughout the corridor visioning process, land use and related development implications emerged as future alternatives that could add vitality to Fountain and Monument creeks. Redevelopment and reinvestment areas throughout the corridor are designed to support recommendations of the revitalization as well as the Plan Colorado Springs' (PlanCOS) objectives: Vibrant Neighborhoods, Unique Places, Thriving Economy, Strong Connections, Renowned Culture, and Majestic Landscapes.

Development of these areas is instrumental to the success of this vision's key principles for a holistic greenway and are vital to the success of the larger PlanCOS goals. Opportunities for redevelopment will:

- Improve connectivity to neighborhoods both within and across the watershed.
- Enhance accessibility to green infrastructure improvements not seen in the corridor.
- Facilitate access to downtown in support of key City for Champions projects and other economic vitality projects.
- Reflect the cultural and artistic interests of the Pikes Peak Region.
- Add options for multimodal connections to downtown and historic neighborhoods.

These redevelopment and reinvestment opportunities foster economic support by creating investment in both the existing neighborhoods and future development in order to generate forward-thinking, sustainable growth, housing supply, and economic progress.

The vision estimates over 350 acres of redevelopment opportunities.

CONNECTED CORRIDORS

NORTH CORRIDOR

Key corridor investment will create large-scale connective improvements that are watershed-wide to smaller, more site-specific connective improvements that bind revitalized parks together for increased access and opportunity. These connections not only strengthen the greenway recommendations for sustainable growth but also support the framework for a regional context that can extend beyond the corridor.

The Connected Corridors map diagrams illustrate the areas between the park sites and highlight the significance of trail connections, riparian habitat, water quality floodplain terraces, and creek activation for outdoor education and stewardship.

MONUMENT VALLEY CORRIDOR

DOWNTOWN CORRIDOR

SOUTH CORRIDOR

LEGEND FOR CORRIDOR MAPS

- Proposed New and Revitalized Park Areas (See Section 3)
- Creek Channels
- Water Quality / Passive Recreation
- River Edge / Riparian Planting
- Proposed Greenspace
- Existing Greenspace
- Redevelopment Opportunity
- Neighborhood Access
- Trail Connection

NORTH CORRIDOR

1 Northern Reach

- The existing diversion structure diverts water to Pikeview Reservoir and utilizes City water rights to flush the creek, pushing sediment downstream. There is an environmental opportunity to improve the diversion structure and the sediment transport downstream.
- Potential partnership opportunities with University Village businesses north of Garden of the Gods Road.
- The Pikes Peak Greenway Trail provides connections to University Park, Austin Bluffs, and Pulpit Rock to the north.
- The original stream alignment in the north section is largely intact with extensive floodplain terraces and mature cottonwood groves. This section of the channel should be preserved as natural corridor with extensive habitat and restoration of eroded stream banks and limited recreational access.
- The adjacency of Goose Gossage Park and relocating non-compatible uses provides opportunities to enhance the corridor's natural floodplain functions and repair damage caused by bank erosion.

2 The Narrows

- Deeply incised and limited floodplain natural functions with the exception of the southeast corner where it transitions into the floodplain terraces of Monument Valley Park.
- The banks of the channel are extremely steep, with minimal or no stream channel access, and limited wetland landscape.
- Significant opportunity for redevelopment on the western edge and improving access to the corridor for the neighborhood to the east.

MONUMENT VALLEY CORRIDOR

3 Monument Valley Park North

- Western levee realigned closer to the highway to restore a functioning floodplain, creek sinuosity, and add water quality terraces.
- Informal trails within valley edges increase interaction with the creek and respect riparian habitat.
- Improved connections to the Old North End Neighborhood and corridor

4 Monument Valley Park South

- Historic elements are highlighted and enhanced while continuing to establish a functioning floodplain.
- Realigned pedestrian bridge over Monument Creek to strengthen the connection between Formal Gardens and Tahoma Springs as historic landmarks.
- Expanded railroad bridge allows for improved pedestrian connectivity.
- Underused land near the railway is reclaimed as a large water quality treatment area for highway runoff.
- Linear water quality along the eastern edge treats runoff from adjacent neighborhoods.

LEGEND

-  Proposed New and Revitalized Park Areas (See Section 3)
-  Creek Channels
-  Water Quality / Passive Recreation
-  River Edge / Riparian Planting
-  Proposed Greenspace
-  Existing Greenspace
-  Redevelopment Opportunity
-  Neighborhood Access
-  Trail Connection

DOWNTOWN CORRIDOR

5 Old Depot Triangle

- Industrial area between the Old Depot and the Creek repurposed as a development with new vehicular access, expanded parking, and outdoor gathering area for arts festival or beer garden.
- Pedestrian promenade cantilevers over Monument Creek under Colorado Avenue, connecting to America the Beautiful Park.

6 Tejon Wetlands

- Creek sinuosity is dramatically improved between the new Drake Waterfront and Gateway South Park.
- Floodplain terraces create large water quality treatment areas for adjacent neighborhoods, expand trail networks, and provide water access and outdoor education opportunities.

7 Shooks Run

- An 11-acre parcel at the confluence of Fountain Creek and Shooks Run is transformed into a water quality treatment park where terraces and elevated trails pull water from the creeks and adjacent developments to be cleaned before re-entering the waterway.
- Emphasis on riparian habitat, passive recreation, and outdoor education create a terminus for the urban greenway corridor.

SOUTH CORRIDOR

10 Las Vegas Wetlands

Opportunity to construct a natural wetland system in lieu of a cooling tower to cool the effluent water from the Water Resource Recovery Center plant before it re-enters the creek channel. Location of the compliance monitoring station would be moved to do temperature testing at the wetland discharge location.

8 Ecological Restoration

The South Corridor is focused on habitat restoration as a managed refuge for birding, fishing, and wildlife. Restoring native riparian and habitat areas will provide a unique area along the creek corridor within the city. A fish monitoring site at Janitell Road will provide metrics for long-term health improvement of the corridor.

9 Trail Improvements

- Improve trail corridor from Shooks Run to Sand Creek to a Tier 1 paved trail. Opportunity for a potential nature trail and educational opportunities to demonstrate and highlight the restoration and habitat area.
- Creek overlooks at El Pomar Youth Sports Park (on the west side) and The Aviary Disc Golf Course Trailhead (on the east side) can provide upstream and downstream views of the ecological area.
- Provide a new trail connection to the Sand Creek Trail from the Fountain Creek Trail at the Sand Creek Confluence. Include improvements in the creek.
- Provide pedestrian crossing from Fountain Creek Trail to the Fountain Creek Recovery Project site.

11 Hanging Drop Structure

Improvements to the existing hanging drop structure located below the Highway 24 on-ramp will improve fish passage, sediment transport, and energy dissipation.

12 Spring Creek Trail Connection

The future connection of the Spring Creek Trail will provide key access to the Pikes Peak Greenway Trail, linking numerous neighborhoods in southeastern Colorado Springs to the waterway.

A RESTORED FLOODPLAIN

Enhanced natural functions, improved stormwater management, and expanded recreation opportunities

Restoring the natural functions of the floodplain will improve water quality from storm runoff, reduce flood risk, and increase groundwater recharge. Floodplain terraces will be re-established to create a range of native plant communities and wildlife habitats, while allowing for more diverse and extensive passive- and nature-based recreation uses.

- 1 Restore creek sinuosity to improve aquatic habitat and ground water recharge.
- 2 Design erosion control structures to encourage safe access to the water.
- 3 Restore floodplain terraces to increase ecological diversity and support a broader range of stream risk management goals.
 - 3a Low terraces contain smaller storm events and support diverse riparian plant communities.
 - 3b Intermediate terraces capture and infiltrate flows from larger storms and store sediment.
 - 3c Upper terraces capture and infiltrate runoff from neighborhoods to improve water quality.
- 4 Trails: water-based and nature-based recreation uses extend throughout the corridor.
 - 4a Lower terrace recreation uses are limited to rustic trails and multi-functional channel structures.
 - 4b Intermediate terraces include a variety of trails, passive recreation uses, and adventure sports.
 - 4c Upper terraces allow for traditional neighborhood and urban parks, and passive uses.

Section 3: Eight New and Revitalized Parks

EIGHT NEW AND REVITALIZED PARKS | OVERVIEW

This park area study is currently underway.

North Nevada Promenade and Pikeview Reservoir Park

Improved Park Amenities and Creek Access for Future North Nevada Redevelopment

Mid-Term Project

A series of new parks serving existing and proposed neighborhoods lining the east edge of Monument Creek and a new park providing greater access to Pikeview Reservoir will bring much-needed recreation opportunities to the existing and proposed communities along the creek and be a catalyst for redevelopment of the North Nevada Corridor.

This park area study is currently underway.

Goose Gossage Park Adventure Playground

A Re-Envisioned Playground for Discovery and Nature Play Connects the Park to the Creek

Short-Term Project

Modifications and enhancements to the existing playground in Goose Gossage Park will transform the existing playground into an adventure and nature play experience and provide extensive opportunities to access the water's edge.

This park area study is currently underway.

Roswell Place

A Stormwater Meadows Promenade and Mini Park form a Continuous Edge along the Creek

Mid-Term Project

The potential for redevelopment of the west side of the valley, combined with selective acquisition of underutilized lots on the east side of the channel, allows for bank restoration and stabilization, integration of stormwater meadows, and a rustic pedestrian promenade and passive park.

Monument Valley Park and Centennial Neighborhood

A Restored Park Design and a New Neighborhood

Long-Term Project

General Palmer's original concept for a pastoral, natural park along a free-flowing stream will be restored on the north end of Monument Valley Park while a new park and neighborhood is defined west of the creek at the existing Fontanero Maintenance Yard.

College Landing at Uintah

A Gateway to the Old North End and a Connected Colorado College Campus

Mid-Term Project

Modifying existing walls that confine Monument Creek creates a defining entrance for both the Colorado College Campus and Downtown. Moreover, this establishes a gathering place along the creek that unifies Monument Creek Park and the campus.

America the Beautiful Park

A Celebration of the Confluence of Fountain and Monument Creeks

Short-Term Project

The original vision for America the Beautiful Park will be realized by restoring Monument Creek's primary access for paddle sports, tubing, and enjoyment of its natural qualities.

Drake Waterfront Reimagined

A Catalyst for Redevelopment and Neighborhood Connections to the Waterway

Long-Term Project

Fountain Creek's 50 feet of elevation change between Cimarron Street and Mill Street will be utilized for paddle sports, tubing, and informal water play. A series of riffles, small drops, and pools framed by terraces and groves, form an urban edge to the new Drake neighborhood.

Gateway Park South

A New Nature-based Park for the Existing Mill Street and Surrounding Neighborhoods

Short-Term Project

The Fountain Creek corridor creates a new linear park celebrating the natural qualities of the creek and the potential for nature- and water-based recreation. A revitalized Dorchester Park is a central neighborhood gathering place and gateway to the Downtown from the south.

NORTH NEVADA PROMENADE AND PIKEVIEW RESERVOIR PARK

- ① **Pikes View Reservoir Neighborhood Park** provides improved access to the reservoir and neighborhood amenities.
- ② **Stream and Bank Stabilization** using a combination of traditional materials and riparian plants.
- ③ **East Bluff Promenade** provides fire access that also serves as pedestrian walkway and integrates stormwater treatment from adjacent future development areas.
- ④ **Stormwater Parkway** within the proposed redevelopment provides local access and captures, conveys, and treats stormwater runoff.
- ⑤ **Future Redevelopment**
- ⑥ **Mountain View Parklet** provides a small neighborhood park for informal play with panoramic views.
- ⑦ **Templeton Gap Parkway** removes the existing concrete channel to create a series of stilling basins that also treat runoff to improve water quality.
- ⑧ **Small Neighborhood Park** on existing landfill.
- ⑨ **Three Pedestrian Bridges** provide neighborhood access to the regional trail and Goose Gossage Park amenities, and across Templeton Gap.
- ⑩ **Restore the Pinyon/Juniper Plant Communities** native to the local area.

Corridor Key Map

Bluff promenade

Improved fishing access

A series of stilling basins to treat stormwater runoff

OVERVIEW

A series of new parks serving existing and proposed neighborhoods lining the east edge of Monument Creek and a new park providing greater access to Pikeview Reservoir will bring much-needed recreation opportunities to the existing and proposed communities along the creek and catalyze redevelopment of the North Nevada corridor. The expansive and mature groves of cottonwoods and natural qualities of the valley bottom will be preserved and enhanced with improved access to the creek provided at strategic locations. The existing regional trail will be complemented by local trails and bridges that will improve connections to the adjacent campus and neighborhoods.

Two proposed “stormwater parkways” will become the centerpiece of the proposed redevelopment area to the west of Nevada Street. The Templeton Gap channel will be rebuilt, and the proposed parkway within the redevelopment area will be designed to extend the natural qualities of the creek valley into the community. A series of terraced “stormwater meadows” will improve water quality of flows in the existing Templeton Gap channel and runoff from redevelopment areas while minimizing the need for subsurface piped stormwater infrastructure.

POTENTIAL FUNDING SOURCES

- Public funding will include municipal funding, state agency opportunities, and federal agency programs focused on environmental restoration of the creek
- Public funding associated with the redevelopment of the confluence of Monument Creek and the T-Gap Floodway
- Metropolitan districts or special assessment districts
- Private funding sources will leverage public planned investments to support creek edge improvements and the redevelopment of the North Nevada corridor

FUNDING OPPORTUNITIES

- Environmental and riparian restoration
- Commercial and multifamily redevelopment opportunities
- Stormwater and floodplain management
- Recreational opportunities

GOOSE GOSSAGE PARK ADVENTURE PLAYGROUND

- ① **Re-imagined Adventure Playground** provides an opportunity for Goose Gossage Park to link more strongly to the creek and provide opportunities for adventure play.
- ② **Water Quality Terraces**
- ③ **Existing City Maintenance Facility Site** is relocated, and a floodplain terrace is developed as a wet meadow that functions to treat stormwater from the adjacent neighborhood.
- ④ **Stream and Bank Stabilization** uses a combination of traditional materials and riparian plants.
- ⑤ **Restore the Pinyon/Juniper Plant Communities** native to the local area.

Corridor Key Map

Discovery playground connects the park to the creek

Stormwater meadow

Pinyon pine / juniper landscape

OVERVIEW

The use of riparian vegetation as part of stabilizing the banks of Monument Creek and development of multiple stormwater meadows along the east edge of the valley will greatly enhance the valley's ecological diversity and natural qualities. Non-compatible land uses on the eastern edge of the valley will be relocated to allow significant expansion of open space and creation of extensive stormwater meadows that will treat contaminated runoff from surrounding areas. Modifications and enhancements to the existing playground in Goose Gossage Park will transform the existing playground into an adventure and nature play experience and provide extensive opportunities to access the water's edge.

POTENTIAL FUNDING SOURCES

- Public funding will include municipal funding, state agency opportunities, and federal agency programs focused on environmental restoration of the creek
- Philanthropic funding for nature play, health, and wellness
- Public funding for adventure play and creek access

FUNDING OPPORTUNITIES

- Environmental and riparian restoration
- Nature-based play experiences
- Stormwater and floodplain management
- Recreational opportunities

ROSWELL PLACE

- ① **Roswell Park Creek Access** includes modification of the stream edge in the park to connect directly to the creek and provide access to the water's edge.
- ② **Partial Acquisition of vacant lots** for bank stabilization.
- ③ **Stream and Bank Stabilization** using a combination of traditional materials and riparian plants.
- ④ **Neighborhood Scale Water Quality and Treatment** includes a floodplain terrace and wet meadow that functions to treat stormwater from the adjacent neighborhood.
- ⑤ **Potential Redevelopment**
- ⑥ **Pikes Peak Greenway Stormwater Promenade** includes local park amenities and trails integrated with stormwater treatment for adjacent proposed development.
- ⑦ **Restore the Pinyon/Juniper Plant Communities** native to the local area.

Corridor Key Map

Creek access

Stream and bank stabilization

Stormwater promenade

OVERVIEW

The potential for redevelopment of the west side of the valley, combined with selective acquisition of underutilized lots on the east side of the channel, allows for restoration and stabilization of the extensive bank erosion in this area and re-establishment of riparian habitat. Integration of stormwater meadows and a rustic pedestrian promenade and passive park along the west side of the channel will greatly expand creek access and natural qualities of the west bank of the channel. The creek bank along Roswell Park will be laid back, with a series of lawn and meadow terraces extended to the creek's edge to enhance the park's recreation opportunities.

POTENTIAL FUNDING SOURCES

- Public funding will include municipal funding, state agency opportunities, and federal agency programs focused on environmental restoration of the creek
- Public funding to provide renovation of the park and connection to the creek
- Philanthropic funding to improve neighborhood health, wellness and access to the creek

FUNDING OPPORTUNITIES

- Environmental and riparian restoration
- Nature-based play experiences
- Neighborhood enhancements and connections to nature
- Recreational opportunities

MONUMENT VALLEY PARK AND CENTENNIAL NEIGHBORHOOD

- ① **River Beach** provides access and direct interaction with the creek.
- ② **River Access Sloped Lawn Terraces** define recreational spaces.
- ③ **Low Flow Crossing** connects Old North End and western neighborhoods.
- ④ **River Plaza** is a multi-purpose space near the creek for residents.
- ⑤ **Pedestrian Promenade** integrates new areas to existing trails and open spaces.
- ⑥ **Water Quality Areas and Boardwalks** establish natural riparian areas.
- ⑦ **Flexible Plaza and Open Lawn** offers passive use and open space.
- ⑧ **Lower Trail** enables seasonal access to lower creek areas.
- ⑨ **Future Development Areas** foster residential and commercial opportunities.
- ⑩ **Existing Electrical Substation** to remain.
- ⑪ **Levee Removal / Relocation** in selective locations for floodplain management.
- ⑫ **New Pedestrian Bridge** creates critical east-west connection for all.
- ⑬ **Reshaped Trailhead and Creek Access** improves mobility and use of trail system.

Corridor Key Map

Restored floodplain terraces

Development oriented towards the creek

Public pedestrian promenade edge

OVERVIEW

Land use, waterways, and park space are re-envisioned to pay homage to the values of public space in Colorado Springs as pioneered by General Palmer. This project site celebrates the creek areas around Monument Valley Park, restoring the creekside pastoral qualities imagined over a century ago. New opportunities include reclaimed land for development and restored natural corridor for active and passive recreation. The design explores opportunities for multi-purpose infrastructure that benefits the creek ecosystem, stormwater, and community. Geographically, this section follows the Monument Creek corridor from Popcycle Bridge south to Fontanero Street including the Fontanero Service Yard and a portion of Monument Valley Park.

POTENTIAL FUNDING SOURCES

- Public funding will include municipal funding, state agency opportunities, and federal agency programs focused on specific outcomes
- Philanthropic funding and granting organizations will be critical partners in the visioning and specific elements
- Private funding sources will leverage the planned public investment to create new neighborhoods and supporting development

FUNDING OPPORTUNITIES

- Environmental and riparian restoration
- Residential/commercial development opportunities
- Artistic and cultural interests
- Stormwater and floodplain management
- Recreational opportunities

Existing conditions

MONUMENT VALLEY PARK AND CENTENNIAL NEIGHBORHOOD

- ① **River Beach** provides access and direct interaction with the creek.
- ② **River Access Sloped Lawn Terraces** define additional recreational spaces.
- ③ **Low Flow Crossing** connects Old North End and western neighborhoods.
- ④ **River Plaza** is a multi-purpose space near the creek for residents.
- ⑤ **Pedestrian Promenade** integrates new areas to existing trails and open spaces.
- ⑥ **Water Quality Open Space** is developed as a public-private partnership.

COLLEGE LANDING AT UINTAH

- ① **River Beach** invites access and direct interaction with creek.
- ② **River Access Sloped Lawn Terraces** create study and social spaces.
- ③ **Low Flow Crossing** emphasizes cross-creek connection.
- ④ **Upper Plaza** connects students to the corridor and provides views.
- ⑤ **River Amphitheater and Stage Deck** promotes performance and education.
- ⑥ **New Pedestrian Bridge** unites campus areas across the creek.
- ⑦ **Water Quality Areas** treat stormwater from adjacent neighborhoods.
- ⑧ **Lower Trail** provides seasonal access to lower creek areas.
- ⑨ **Future Development** utilizes park and creek.
- ⑩ **Van Briggle Building** to remain with future use.
- ⑪ **Pikes Peak Greenway Trail** with enhanced trail connectivity.
- ⑫ **Existing Lawn** to remain for continued recreational use.
- ⑬ **Enhanced Connection to College** brings students and faculty efficiently through campus.

Corridor Key Map

River amphitheater and stage

Lawn terraces

Interconnected pathways for cyclists and pedestrians

OVERVIEW

As the primary entry to Colorado College's campus and Old North End Neighborhood, this area should celebrate the educational and historical heart of Colorado Springs. The creek brings together the campus and southern end of Monument Valley Park to provide a destination for leisure activities and campus ceremonies along the creek, while maintaining the continuity of natural systems.

This focus area section roughly follows Monument Creek corridor from north of Uintah Street south to Mesa Avenue including portions of Monument Valley Park and Colorado College.

POTENTIAL FUNDING SOURCES

- Colorado College, philanthropic funding, and granting organizations will be critical partners in the visioning and specific elements
- Public funding will include municipal funding, state agency opportunities, and federal agency programs focused on specific outcomes
- Metropolitan districts or special assessment districts
- Private funding sources will be keenly interested in the opportunities for Colorado College students and Old North End Neighborhood residents

FUNDING OPPORTUNITIES

- Environmental and riparian restoration
- Residential/commercial development opportunities
- Artistic and cultural interests
- Stormwater and floodplain management
- Recreational opportunities

Existing conditions

COLLEGE LANDING AT UINTAH

- ① **River Beach** invites access and direct interaction with the creek.
- ② **River Access Sloped Lawn Terraces** create study and social spaces.
- ③ **Low Flow Crossing** emphasizes cross-creek connection and exploration.
- ④ **Upper Plaza** connects students to corridor and provides views.
- ⑤ **River Amphitheater and Stage Deck** promotes performance and education.
- ⑥ **New Pedestrian Bridge** unites campus areas across the creek.

AMERICA THE BEAUTIFUL PARK

- ① **River Beach** offers access and direct interaction with the creek.
- ② **River Access Terraces** create creekside seating to view watersports.
- ③ **Water Quality Area and Boardwalk** provide dynamic wildlife viewing.
- ④ **Restroom, Changing Area, and Plaza** used by families and downtown tourism.
- ⑤ **Existing Lawn** enhanced by robust programming of festival and events.
- ⑥ **Existing Julie Penrose Fountain** with terraced expansion.
- ⑦ **New Pedestrian Bridges** unite east and west while opening visual corridor.
- ⑧ **Permeable Parking / Festival Court** treats stormwater and expands programs.
- ⑨ **Future Development** by private investment utilizes park and creek.
- ⑩ **Existing U.S. Olympic Office Building** will flourish as development of area continues.
- ⑪ **Cantilevered Promenade under Colorado Avenue** connects to Downtown.
- ⑫ **Terraced Lawn and Confluence Access** invites visitors with signature canopy.
- ⑬ **Relocated Turnaround** (roadway alignment to be determined with parcel development).
- ⑭ **Existing Pedestrian Bridge** leads to U.S. Olympic & Paralympic Museum.

Corridor Key Map

River beach creek access

Water quality boardwalks

Recreational water access and put-in

OVERVIEW

America the Beautiful Park is honored as a premier downtown amenity space established with its inception almost 30 years ago in the 1992 Downtown Action Plan.

The confluence of Monument and Fountain creeks has strong potential to stimulate further investment and create a more cohesive urban fabric from the downtown core to creekside. This will be the entry point for water activities such as fishing, tubing and stand-up paddle boarding. This will become a central recreation point for downtown residents and tourists visiting the Pikes Peak Region.

POTENTIAL FUNDING SOURCES

- Public funding including municipal, state agency, and federal agency programs
- Philanthropic funding and granting organizations
- Private funding sources

FUNDING OPPORTUNITIES

- Environmental and riparian restoration
- Residential/commercial development opportunities
- Artistic and cultural interests
- Stormwater and floodplain management
- Recreational opportunities

Existing conditions

AMERICA THE BEAUTIFUL PARK

- ① **River Beach** offers access and direct interaction with the creek.
- ② **River Access Terraces** create creekside seating to view watersports.
- ③ **Water Quality Area and Boardwalk** provide dynamic wildlife viewing.
- ④ **Restroom, Changing Area, and Plaza** used by families and downtown tourism.
- ⑤ **Existing Lawn** enhanced by robust programming of festival and events.
- ⑥ **Existing Julie Penrose Fountain** with terraced expansion.
- ⑦ **New Pedestrian Bridges** unites east and west while opening visual corridor.

DRAKE WATERFRONT REIMAGINED

- ① **River Beach** builds access and direct interaction with the creek.
- ② **Creek Access Terraces at Drop Structures** create river access for all.
- ③ **Stepped Seating and Lawn Terraces** dedicates space to socialize and recreate.
- ④ **Water Quality Areas and Boardwalks** receive and treat stormwater.
- ⑤ **Pedestrian Promenade** connects new areas to existing trails.
- ⑥ **Flexible Sloped Lawn** provides new creekside space to socialize and relax.
- ⑦ **Primary Tubing/Watersports Takeout** at River Beach.
- ⑧ **Pikes Peak Greenway Trail** provides safe access for pedestrians and cyclists.
- ⑨ **New Roadway with Development Access** connects neighborhoods.
- ⑩ **Future Development** determined through separate visioning process.
- ⑪ **Existing Electrical Substation** to remain.
- ⑫ **New Pedestrian Bridge** spans creek banks and gives access to new areas.
- ⑬ **Restroom, Plaza, and Loading Zone** located at secondary water takeout point.

Corridor Key Map

Safe creekside access and water play

One mile water adventure zone

New community development with public edge

OVERVIEW

As the historic Drake site undergoes an extensive planning process, new possibilities must be considered for recreation, development, water quality, and habitat along the approximate one-mile of neglected and forgotten creek frontage. This project calls for engaged creekside land use and the reconnection of the Mill Street Neighborhood, following Fountain Creek from Cimarron Street south and east to Las Vegas Street.

The creek's 50 feet of vertical elevation change in this section will be utilized for paddle sports, tubing, and informal water-play. A series of riffles, small drops, and pools framed by terraces and groves form an urban edge to the new neighborhood.

POTENTIAL FUNDING SOURCES

- Public funding will include municipal, state agency opportunities, and federal agency programs focused on specific outcomes.
- Philanthropic and granting organizations are critical partners in the visioning and specific element.
- Private funding will leverage public investment in site clean up.

FUNDING OPPORTUNITIES

- Environmental and riparian restoration
- Residential/commercial development opportunities
- Artistic and cultural interests
- Stormwater and floodplain management
- Recreational opportunities

Existing conditions

DRAKE WATERFRONT REIMAGINED

- ① **River Beach** builds access and direct interaction with the creek.
- ② **Creek Access Terraces at Drop Structures** create river access for all.
- ③ **Stepped Seating and Lawn Terraces** dedicates space to socialize and recreate.
- ④ **Water Quality Areas and Boardwalks** receive and treat stormwater.
- ⑤ **Pedestrian Promenade** connects new areas to existing trails.
- ⑥ **Flexible Sloped Lawn** forms a new creekside space to interact and relax.

GATEWAY PARK SOUTH

- ① **River Beach** offers a final one-mile float take-out.
- ② **River Access Terraces** dedicate space for programmed activities and events.
- ③ **Existing Historic Shade Structure** retains historical community significance.
- ④ **Sloped Lawn** provides creekside opportunities to socialize and relax.
- ⑤ **Flexible Plaza with Shaded Seating Edge** extends terrace programming.
- ⑥ **New Signature Pedestrian Bridge** connects creek and park to Ivywild area.
- ⑦ **New South Pikes Peak Greenway Trail** transfers commuters to westerly trails.
- ⑧ **Terraced Lawn Seating** adds additional recreational and social spaces.
- ⑨ **New Roadway with Parking and Drop-Off** creates access into site.
- ⑩ **Future Development** utilizes park and creek.
- ⑪ **Water Quality Areas** enhance riparian zones and treat stormwater.
- ⑫ **Pikes Peak Greenway Trail** provides safe means of walking and biking.
- ⑬ **New Low Flow Crossing** extends south trail connections.
- ⑭ **Riparian Planting** provides critical ecological habitat.

Corridor Key Map

Creekside sunning and programmatic area

Signature pedestrian bridge

Flexible plaza with shaded seating

OVERVIEW

This is a vital renewal effort for the southern gateway into Downtown Colorado Springs. Designed around the existing historic structure, a revitalized and reconstructed park provides a central gathering place for the south-end as part of a comprehensive redevelopment of the park. The site functions as the final takeout along the one-mile instream water course. Significant challenges with unhoused communities are integral to the overall planning effort for this site and the adjacent creek.

This site follows the Fountain Creek corridor between Tejon Street and Nevada Avenue. The space is activated through re-imagined seating, creek access, and circulation. New connections to the creek, trails, and community reinvigorate one of Colorado Springs' oldest parks.

POTENTIAL FUNDING SOURCE

- Public funding will include municipal funding, state agency opportunities, and federal agency programs focused on specific outcomes.
- Philanthropic funding and granting organizations will be critical partners in the visioning and specific elements.
- Private funding sources will support public initiatives and investment.

FUNDING OPPORTUNITIES

- Environmental and riparian restoration
- Residential/commercial development opportunities
- Artistic and cultural interests
- Stormwater and floodplain management
- Recreational opportunities

- ④ **Sloped Lawn** provides creekside opportunities to socialize and relax.
- ⑤ **Flexible Plaza with Shaded Seating Edge** extends terrace programming.
- ⑥ **New Signature Pedestrian Bridge** connects creek and park to Ivywild area.
- ⑦ **New South Pikes Peak Greenway Trail** transfers commuters to westerly trails.

Acknowledgments

This vision has been made possible exclusively by a Lyda Hill Philanthropies grant. The significance of re-envisioning the Fountain and Monument Creek corridors in Colorado Springs cannot not be overstated as the Pikes Peak Region continues to evolve and grow. The leadership of Lyda Hill Philanthropies to develop an approach that reconsiders natural creek function, creekside recreation, economic vitality and placemaking has provided the opportunity for a robust community discussion about the future of all of our communities' creeks.
